## Colonial Origins of Comparative Development

- **AJR measure of institutions: “protection against expropriation.”**
  - *Political Risk Services* publishes this data.
  - One could argue that this is a very narrow measure, but anyway ...

# Colonial Origins of Comparative Development

- **AJR measure of institutions: “protection against expropriation.”**
  - *Political Risk Services* publishes this data.
  - One could argue that this is a very narrow measure, but anyway ...
- **The regression they’re interested in:**

$$y_i = C + \beta R_i + \mathbf{X}_i' \mathbf{b} + \epsilon_i$$

where:

- $y_i$  is log per-capita GDP
- $R_i$  is “protection against expropriation”
- $X$  is a vector of country characteristics (latitude, regional membership).

## ■ OLS Regression from AJR

*Notes:* Dependent variable: columns (1)–(6), log GDP per capita (PPP basis) in 1995, current prices (from the World Bank’s World Development Indicators 1999); columns (7)–(8), log output per worker in 1988 from Hall and Jones (1999). Average protection against expropriation risk is measured on a scale from 0 to 10, where a higher score means more protection against expropriation, averaged over 1985 to 1995, from Political Risk Services. Standard errors are in parentheses. In regressions with continent dummies, the dummy for America is omitted. See Appendix Table A1 for more detailed variable definitions and sources. Of the countries in our base sample, Hall and Jones do not report output per worker in the Bahamas, Ethiopia, and Vietnam.

## ■ Accompanying Diagram to OLS Regression

# Endogeneity

**This regression perfectly illustrates different aspects of endogeneity:**

**This regression perfectly illustrates different aspects of endogeneity:**

- Reverse Causation:
  - Richer countries more protected from expropriation
  - Richer countries perceived to have more protections

# Endogeneity

**This regression perfectly illustrates different aspects of endogeneity:**

■ **Reverse Causation:**

- Richer countries more protected from expropriation
- Richer countries perceived to have more protections

■ **Omitted Variables:**

- Legal heritage, government policy, entrepreneurship

# Endogeneity

**This regression perfectly illustrates different aspects of endogeneity:**

- **Reverse Causation:**

- Richer countries more protected from expropriation
- Richer countries perceived to have more protections

- **Omitted Variables:**

- Legal heritage, government policy, entrepreneurship

- **Measurement Error**

- Protection measured with noise, especially in developing countries

# Endogeneity

- **Proposed instrument built from the logical chain:**
  - (potential) settler mortality  $\Rightarrow$  settlements  $\Rightarrow$  early institutions  $\Rightarrow$  current institutions  $\Rightarrow$  current performance.
  - Use mortality rates of soldiers, bishops, and sailors in the colonies.

|                                                                                     | Base<br>sample<br>(1) | Base<br>sample<br>(2) | Base sample<br>without<br>Neo-Europes<br>(3) | Base sample<br>without<br>Neo-Europes<br>(4) | Base<br>sample<br>without<br>Africa<br>(5) | Base<br>sample<br>without<br>Africa<br>(6) | Base<br>sample<br>with<br>continent<br>dummies<br>(7) | Base<br>sample<br>with<br>continent<br>dummies<br>(8) | Base<br>sample,<br>dependent<br>variable is<br>log output<br>per worker<br>(9) |

## ■ **What sort of magnitude are we talking about?**

- Two countries with different expropriation risk: Nigeria and Chile.
- The 2SLS estimate predicts a 7-times difference in per-capita income.
- Not implausible: Chile around 11 times as rich at time of study

## ■ **What sort of magnitude are we talking about?**

- Two countries with different expropriation risk: Nigeria and Chile.
- The 2SLS estimate predicts a 7-times difference in per-capita income.
- Not implausible: Chile around 11 times as rich at time of study

## ■ **Is the instrument believable?**

- Main threat to exclusion restriction is the disease environment.
- Malaria comes particularly to mind.

# Long Shadows: The Plough

Alesina-Giuliano-Nunn *QJE* 2013

- **Tests the famous hypothesis of Esther Boserup:**
  - Modern gender roles depend on traditional agricultural practices.
  - Specifically, shifting cultivation versus the use of the plough.
  - Latter requires greater body strength, favors men.
  - Also less need for weeding.

# Long Shadows: The Plough

TRADITIONAL PLOUGH USE AND FEMALE PARTICIPATION IN PRE-INDUSTRIAL AGRICULTURE

|                                | (1)                                                                                                | (2)                  | (3)                 | (4)                  | (5)                  | (6)                  | (7)                  |

## Long Shadows: The Plough

Alesina-Giuliano-Nunn 2013.

“Societies characterized by plough agriculture, and the resulting gender-based division of labor, developed the belief that the natural place for women is within the home. [These cultural beliefs tend to persist even if the economy moves out of agriculture](#), affecting the participation of women in activities performed outside the home, such as market employment, entrepreneurship, or participation in politics.”

# Long Shadows: The Plough

Alesina-Giuliano-Nunn 2013.

“Societies characterized by plough agriculture, and the resulting gender-based division of labor, developed the belief that the natural place for women is within the home. **These cultural beliefs tend to persist even if the economy moves out of agriculture**, affecting the participation of women in activities performed outside the home, such as market employment, entrepreneurship, or participation in politics.”

- **Obvious strategy: regress gender norms today on earlier use of plough.**
- We have pre-historical data on plough use, and
- Modern surveys of gender roles and female participation in labor force.

- **Pre-industrial plough use:**
  - George Murdock's *Ethnographic Atlas*, data on 1265 ethnic groups.
  - Contains data on plough use for 1156 ethnicities, mainly before 1950.
  - 997: no plough, 141: aboriginal plough, 18: after European contact.

### ■ Pre-industrial plough use:

- George Murdock's *Ethnographic Atlas*, data on 1265 ethnic groups.
- Contains data on plough use for 1156 ethnicities, mainly before 1950.
- 997: no plough, 141: aboriginal plough, 18: after European contact.

### ■ Various controls:

- **Historical**: domesticated animals, population density, jurisdictional hierarchies, group location
- **Contemporary**: per-capita GDP

### ■ Matching present to past:

- *Ethnologue*: Current geographical distribution of 7.612 living languages.
- Connect these to ethnic groups in Murdock's Atlas.
- *Landscan*: Population estimates by small grid cells.
- Average these to create **ancestral plough use by district or country**.

## Data

### ■ Matching present to past:

- *Ethnologue*: Current geographical distribution of 7.612 living languages.
- Connect these to ethnic groups in Murdock's Atlas.
- *Landscan*: Population estimates by small grid cells.
- Average these to create **ancestral plough use by district or country**.

### ■ Measure of female gender roles today:

- labor force participation
- firm ownership
- participation in national politics

FIGURE II

Traditional Plough Use among the Ethnic/Language Groups Globally

# Testing Boserup's Hypothesis

- **Specification** (country level):

$$y_c = \alpha + \beta \text{Plough}_c + \mathbf{X}_c^H \mathbf{\Gamma} + \mathbf{X}_c^C \mathbf{\Pi} + \varepsilon_c,$$

- where:

$y_c$  is the outcome of interest, and

$\mathbf{X}_c^H$  and  $\mathbf{X}_c^C$  are historical and contemporary controls.

COUNTRY-LEVEL OLS ESTIMATES WITH HISTORICAL AND CONTEMPORARY CONTROLS

## Endogeneity

- **Omitted variables:** historically richer countries could have adopted (and historically richer countries have better gender attitudes today).
- **Reverse causality:** societies with bad gender norms could have adopted the plough (and gender norms are persistent over time).

# Plough-Positive and Plough-Negative Crops

*Pryor Comparative Studies in Society and History* 1985

- **Plough-positive:** teff, wheat, barley, rye, wet rice.
- **Plough-negative:** maize, sorghum, millet, tubers.

# Plough-Positive and Plough-Negative Crops

*Pryor Comparative Studies in Society and History* 1985

- **Plough-positive:** teff, wheat, barley, rye, wet rice.
- **Plough-negative:** maize, sorghum, millet, tubers.
- **Strategy:** Use geo-climatic suitability for plough-⊕ and plough-⊖ crops as instruments for plough adoption. FAO Global Agro-Ecological Zones 2002 database.

# Plough-Positive and Plough-Negative Crops

*Pryor Comparative Studies in Society and History* 1985

- **Plough-positive:** teff, wheat, barley, rye, wet rice.
- **Plough-negative:** maize, sorghum, millet, tubers.
- **Strategy:** Use geo-climatic suitability for plough-⊕ and plough-⊖ crops as instruments for plough adoption. FAO Global Agro-Ecological Zones 2002 database.
- Specifically, assess suitability for the plough-⊕ cereals wheat, barley, and rye, and for the plough-⊖ cereals foxtail millet, pearl millet and sorghum.
- Two sets have similar uses and so only differ in plough suitability.

## COUNTRY-LEVEL 2SLS AND REDUCED-FORM ESTIMATES

## Discussion

- **OLS estimates were pretty large:**

- 1 SD  $\uparrow$  (0.472) in plough use  $\Rightarrow$

FLFP  $\downarrow$  5.85 percentage points (11.4% of its sample mean);

Female Ownership  $\downarrow$  7.19 percentage points (20% of its sample mean);

Women in politics  $\downarrow$  2.28 percentage points (19% of its sample mean);

## Discussion

- **OLS estimates were pretty large:**

- 1 SD  $\uparrow$  (0.472) in plough use  $\Rightarrow$

FLFP  $\downarrow$  5.85 percentage points (11.4% of its sample mean);

Female Ownership  $\downarrow$  7.19 percentage points (20% of its sample mean);

Women in politics  $\downarrow$  2.28 percentage points (19% of its sample mean);

- **IV coefficients even larger than OLS:**

- Endogeneity of plough adoption by historically advanced societies.
- Could have better gender norms today, biasing OLS estimates downward.

# Pathways

- **Pathways:** attitudes or institutions?
- **Attitudes** = beliefs, cultural norms about role of women
- **Institutions** = legal systems and policies that inhibit female participation.
- Authors run OLS for attitudes (WVS) that suggest former, not latter.

# Pathways

- **Pathways:** attitudes or institutions?
- **Attitudes** = beliefs, cultural norms about role of women
- **Institutions** = legal systems and policies that inhibit female participation.
- Authors run OLS for attitudes (WVS) that suggest former, not latter.
- More starkly, they examine children of immigrants in US and Europe:
- Not random, but controls very well for institutions.
- **Estimating equation:**

$$y_{i,s,c} = \alpha_s + \beta \text{Plough}_c + \mathbf{X}_c^H \mathbf{\Gamma} + \mathbf{X}_c^C \mathbf{\Pi} + \mathbf{X}_i \mathbf{\Phi} + \varepsilon_{i,s,c},$$

where  $i$  = daughter of immigrant parent living in state  $s$  with ancestral origin  $c$  (mother or father),  $y_{i,s,c}$  = 0-1 participation in labor market,  $\mathbf{X}_i$  is individual control (age, marital, education, rural-urban, husband characteristics if married.)

DETERMINANTS OF FEMALE LABOR FORCE PARTICIPATION FOR US CHILDREN OF IMMIGRANTS

## Summary

- **Early history and early technology affect modern development.**
- **Problem:** Endogeneity of explanatory variables precludes identification.
- Omitted variables, reverse causation and measurement error

# Summary

- **Early history and early technology affect modern development.**
  - **Problem:** Endogeneity of explanatory variables precludes identification.
  - Omitted variables, reverse causation and measurement error
- **Two Studies of Long Shadows:**
  - Origins of property rights
  - Early technologies

# Summary

- **Early history and early technology affect modern development.**
- **Problem:** Endogeneity of explanatory variables precludes identification.
- Omitted variables, reverse causation and measurement error
- **Two Studies of Long Shadows:**
- Origins of property rights
- Early technologies
- **General strategy: Use of instrumental variables**
- Comment: the identification-creativity frontier.
